Mobile Application Assignment

Complete Answer - Final Submission

1.0 Introduction

Question: Explain the purpose of the mobile application.

Answer: StudyTask is a mobile application designed to help students organize academic tasks, monitor deadlines and manage study activities from one convenient platform.

1.1 Target User

Question: Identify the target users of the application.

Answer: The target users are college and university students who manage multiple assignments, study activities and deadlines.

1.2 Problem

Question: State the problem solved by the application.

Answer: Students can struggle to organize tasks and remember deadlines when information is scattered across notes, messages and different platforms.

1.3 Objective

Question: State the main objective of the application.

Answer: The main objective is to provide a simple mobile platform that helps students organize tasks, track deadlines and manage study activities efficiently.

2.0 User Interface

Question: Design a simple interface for the application.

Answer: The interface uses a clean home screen showing upcoming tasks and deadlines, a clear Add Task button, task cards and a bottom navigation bar.

2.1 Navigation

Question: Describe the application navigation.

Answer: The application uses bottom navigation with Home, Tasks and Profile. Users can select a task to view details and use Add Task to create a new task.

2.2 Screen Design

Question: Design the main screen of the application.

Answer: The main screen displays a welcome header, upcoming task cards with due dates, a clear Add Task button and bottom navigation.

2.3 Usability

Question: State one way to improve application usability.

Answer: Use clear labels, readable text and consistent buttons so users can understand the interface and complete actions with fewer steps.

3.0 Application Features

Question: Describe three main features of the application.

Answer: 1. Task management for adding, editing and viewing academic tasks.
2. Deadline tracking for showing due dates and upcoming work.
3. Reminder notifications for approaching deadlines.

3.1 Data Storage

Question: State how user data is stored.

Answer: User data such as task titles, descriptions and due dates is stored in a local application database so it can be retrieved later.

3.2 Testing

Question: Describe one method used to test the application.

Answer: Functional testing is used by testing actions such as adding, editing and viewing tasks to confirm that each feature produces the expected result.

3.3 Improvement

Question: Suggest one future improvement for the application.

Answer: A future improvement is cloud synchronization so users can back up tasks and access the same data on multiple devices.
